

Ishøj Denmark

RESULTS

2nd technical assistance of the Energy Poverty Advisory Hub 2023-2024

DISCOVER EPAH

- September 2023 - December 2023
- Energy poverty phase:** Implementation
- Topics:** Knowledge transfer, raising awareness

Ishøj Kommune is an urban municipality of 23,000 inhabitants located 20 kilometers outside of Copenhagen. The average disposable income is lower than the national average. With 4.5% of its inhabitants being unemployed, the city has the highest unemployment rate in Denmark.

Objectives

The objectives were:

- to provide primarily but not only **ethnic minorities** with affordable advice about possibilities of energy (and money) saving
- develop an intense and condense timeline to provide the target group with **tips on energy saving** before the colder and darker months took over

Activities & Outcomes

More than 1.700 apartments, in the social housing area, were invited to the **formative event**. The event was also recorded to provide additional information and share on the social media. A **social housing** project supported by the municipality was involved and agreed to collaborate for hosting the events. Effectively engaging the beneficiaries was made possible by their involvement in social housing projects, thanks to their continuous presence and support. Moreover, it helped incorporate additional services to enhance the sense of safety and make the event more appealing, such as providing food and organising activities for children.

Vil du gerne vide, hvordan du kan **spare op til 30%** på din energiregning – samtidig med du nyder en omgang **gratis aftensmad**?
Så kom til energispare-café i Beboerhuset

We managed to provide people in need with energy saving advice that are possible within their limited economy. The technical assistance was a single type of action but it led to the collaboration of the municipality and the expert.

Future

The municipality is trying to activate their citizens and decided to **keep working** with the expert in facilitating additional meetings to spread the message of energy saving behaviour and help more people in vulnerable situations. The expert had the chance to **replicate the model** in other municipalities
